

Wildfire Prevention Report

Knowledge Saves Lives, Inc. offers professional wildfire prevention reports tailored to protect schools, campuses, and other public facilities across California. Our expert team—composed of retired CAL FIRE strike team leaders, emergency responders, and fire mitigation specialists—has over 100 years of combined experience. We conduct thorough on-site evaluations and deliver practical, sustainable fire management strategies.

The wildfire report includes a complete assessment of the building exterior and surrounding property, with a focus on creating defensible space from 0 to 100 feet around structures. We identify fire hazards such as overgrown vegetation, ignition risks, and combustible materials, and provide specific recommendations aligned with State Fire Marshal guidelines. Our service is non-intrusive and designed to avoid disrupting day-to-day operations.

Each report comes with an interactive Google® Map featuring clickable GPS-tagged icons, photographs, and expert commentary. This user-friendly tool helps facilities teams or contractors locate and resolve vulnerabilities quickly and accurately. With a trusted track record—zero sites served by KSL have suffered wildfire-related financial loss—our wildfire prevention service is a proven investment in campus safety and resilience.

Pricing

- **\$2,995**
Per Site

Report Includes

- **Comprehensive Property Assessment:** Our team of seasoned fire professionals conducts an in-depth evaluation of your entire site, identifying wildfire risks around structures and across the landscape—from vegetation overgrowth to combustible storage materials.
- **Interactive Digital Map with GPS-Tagged Findings:** Each report includes a custom Google® Map populated with clickable icons that reveal issue-specific notes, expert recommendations, and high-resolution photos tied to exact GPS locations, streamlining site cleanup and contractor coordination.
- **Defensible Space Zone Recommendations (0–100 Feet):** We outline zone-by-zone mitigation strategies, aligned with State Fire Marshal guidance, detailing what to remove, trim, or relocate within 0–5 ft, 5–30 ft, and 30–100 ft around buildings to maximize fire resistance.
- **Visual Site Markers for Easy Reference:** All identified vulnerabilities are flagged in the field using bright hazard tape, making it easy for your team or vendors to locate and address risks without relying solely on written directions.
- **State Code Compliance & Best Practices:** Reports include a clear summary of current defensible space regulations and fire mitigation recommendations endorsed by the California State Fire Marshal, ensuring alignment with statewide expectations.
- **On-Site Consultation and Risk Reduction Strategies:** Our uniformed consultants are available during the walkthrough to discuss immediate safety concerns and share expert insights on year-round property maintenance and wildfire risk reduction.
- **Maintenance-Friendly Reporting Format:** The final report is structured for easy distribution and implementation, whether it's handed off to facilities staff, shared with leadership, or used to guide external contractor work.
- **Comprehensive Support:** We provide detailed reports with actionable recommendations and interactive site maps to guide you in creating defensible spaces and seasonal mitigation plans.
