

Step 1 Device

Knowledge Saves Lives, Inc. is California's leading law enforcement-based consulting and training firm, offering customized safety solutions backed by real-world experience. Since 2010, the organization has supported schools, government agencies, healthcare systems, faith-based institutions, and private businesses in building safer environments. Our instructors are subject matter experts with backgrounds in law enforcement, fire services, military operations, and emergency response—many of whom have been directly involved in high-profile critical incidents. Through a hands-on, practical approach, Knowledge Saves Lives equips organizations with the insight and tools necessary to prevent, respond to, and recover from emergencies.

The Step1 Device is an affordable, easy-to-use classroom lockdown tool designed to help teachers secure doors faster and more effectively. Installed just above the door handle, it keeps the door slightly ajar while the lock remains engaged—enabling staff to instantly secure the room by sliding the device into a closed position. This low-cost, standardized solution avoids the expense of replacing entire door locking systems and supports district-wide lockdown consistency.
